

RODENT CONTROL

WHAT YOU NEED TO KNOW.

Rats behave predictably. They like to live where people live and they can thrive on just one ounce of food and water per day. Rodent control in Mount Clemens is everyone's responsibility. Good house keeping practices, which eliminate food supply and destroy shelter needed by rats to survive, are the best defense when it comes to rat-proofing our neighborhoods.

WHAT YOU NEED TO DO.

- Use rodent-proof garbage cans with tight fitting lids to eliminate food supply.
- Don't leave pet food out overnight.
- Clean up pet droppings daily.
- Don't feed wildlife. If you have a birdfeeder, it must be 48-inches above ground level. It should be kept clean and tidy and never be overfilled.
- Remove junk trash and tall vegetation that rats use for shelter. Trim weeds and brush and keep grass short (3-inches or less) to minimize cover and food sources.
- All building materials, lumber, boxes, firewood and similar items should be stored either on rat-proof paved areas or stacked 18-inches above the ground.
- Screen dumpster drainage holes with hardware cloth

LOOK FOR THESE COMMON PHYSICAL SIGNS OF RODENT INVESTATION:

- **Runways:** Rodents memorize their territory through physical memory and use the same paths again and again. They prefer to move along objects. Following a run may lead to a rat's shelter.
- **Droppings:** Rat droppings are thin, black and less than 3/4-inch in length.
- **Sightings:** Because rodents are primarily nocturnal, daytime rodent sightings may indicate a significant population.
- **Urine/Odor:** A distinctive, musky odor may be present. Look for urine stains.
- **Gnaw Marks:** Fresh gnaw marks are light and will darken over time.
- **Rub Marks:** Rodents leave rub marks from body oil, grease and dirt along the walls they travel. New rub marks will smear. Old rub marks are darker and may flake off.
- **Tracks:** Footprints and tail drags may be seen in dusty locations. To view difficult-to-see tracks, shine a strong flashlight at a low angle across the dust. A non-toxic tracking powder placed on a suspected rodent trail, and re-inspected the following day, also may assist in identifying tracks.
- **Upset Pets:** House pets, such as cats and dogs may become agitated when they hear rodents gnawing, digging, running and fighting.

FACTS ABOUT RATS

- A pair of rats are able produce as many as 2,000 descendants in a year.
- Rats have very hard teeth and can gnaw through wood, plaster and plastic.
- Rats can crawl through holes the size of a quarter.
- The risk of passing disease from rats to humans is very real.
- Rats are wary of unknown objects in their established foraging path
